

Deployment Notes

Collected from the last three rollouts; every item cost someone an evening.

- Start with the [deployment checklist](#) before touching production.
- Review the changelog with the on-call engineer
- Before you begin
 1. Install the vendor driver
 2. Reboot the machine
 3. Run the self-test

Two habits that survived every retrospective:

- Keep the cable ties with the spares, not the toolbox
- Label both ends of every run before it leaves the bench
